Release Notes
Version: 1.2
Release Date: 13/12/2023

Overview

NMRS release notes serve two primary purposes: Information dissemination and version control. They inform users about changes introduced in a new release and document the specific features, bug fixes, and updates included. These notes are crucial for various stakeholders, including:

- **Funders/I.P.s Leaderships/S.I./ Leadership/Health Informatics/System administrators**: To prepare for upgrades, identify potential issues, and plan system maintenance.
- **Partners Developers:** To understand the changes and their potential impact on their applications or modules.
- **Healthcare providers:** To familiarize themselves with new features and functionalities that might impact their workflow.
- **Facility Monitoring and Evaluation:** To track changes in functionality relevant to their studies or projects.

Objectives:

- Provide a concise and comprehensive overview of all changes introduced in the new release.
- Emphasize the most significant enhancements that benefit users.
- Inform users about addressed concerns and potential improvements in stability.
- Help users evaluate whether to upgrade and provide upgrade instructions.
- Serve as a reference for future reference and understanding of the platform's evolution.

Scope:

Release notes typically cover the following:

- New platform functionality and features include new modules, updates to current modules, API changes, etc.
- Bug fixes and issues resolved: Specific bugs and performance and stability improved.
- Issues and limits identified: Unresolved bugs in the current release and fixes anticipated for future versions.
- Upgrade considerations: Compatibility data, dependencies, and potential migration issues.

Release notes typically exclude the following:

Summary of Modifications in the Patch Releases

Code	Metadata Modifications
NMRS 1.2.0	Development/update of Client Tracking and Discontinuation Form
